

## ISO 9001 CERTIFIED VEHICLE STRUCTURES

Kulkeva Oy is a unit specialised in vehicle body structures, located in Joutseno in Southeastern Finland. Our experience stems from Perävaunu Oy Joka, and we have been in this business for more than 30 years. We are both an engineering office and a manufacturer. We apply a certified ISO 9001 quality system, and we have credit rating AAA.

Our main products comprise body structures for fire engines and structures for vehicle transport trucks, which we also deliver to the Swedish market.

### FIRE AND RESCUE VEHICLES

We manufacture aluminium body structures for fire engines. We design and equip the fire-fighting vehicles as per customer requirements.

### VEHICLE TRANSPORT ACCESSORIES

We design vehicle transport trailers and drawing trucks and manufacture various types of hydraulic lifters and platforms for the handling and loading of vehicles carried. We deliver these to be either installed by the customer or we install them ourselves. Our product range also includes cover systems for combination trucks carrying vehicles, installed on the truck.

### WALL LIFTERS FOR CHIP TRUCKS

We manufacture wall lifters and roof opening devices for chip and peat trucks. We deliver these to be installed by companies which build these types of truck bodies.
